

RELAVIS MOBILIZER

Mobilizing Lotus Notes made simple

“I thought it was pretty extensive what we asked for. But it’s all there and working and it looks great.”

Ray Lighthart, VP of Corporate IT

Mobilizing your business applications has never been easier than with Relavis Mobilizer. It is the only complete platform for developing, deploying and managing your mobile Lotus Notes data. With Relavis Mobilizer, there are no limits. From simple to complex applications, from sophisticated workflow to joining data across multiple databases, Relavis Mobilizer easily brings all your data and business processes down to your BlackBerry devices.

And with the Mobilizer Designer you can do it all without knowing anything about JAVA programming. Programmers simply drag and drop the elements they need for the application and the software will create the JAVA code you need.

Relavis Mobilizer delivers new economies of scale across all your application investments. It allows you to exponentially increase access by making your data accessible anytime, anywhere, and across different handheld device types – not just on your desktop.

Mobilizer

- Retrieve the data you need when out of the office
- Works regardless of connectivity
- 10:1 compression
- Automatic synchronization
- Rarely a need for your laptop when out of the office

What it means to your associates

- Higher productivity
- Access the info you need no matter where you are
- Makes it very easy for you to carry **all** your info
- Always be current
- Easier to get your job done

Your always one click away from all your critical information with Relavis Mobilizer applications

Relavis Mobilizer solves the challenges companies face when mobilizing enterprise applications including: security, application development, deployment and management, support for varying devices and variable network coverage.

Off-line functionality

Users will never be without the data they need because of limited or no network coverage. With Relavis Mobilizer, your data and application reside locally on the device.

Designed for Lotus Domino

Our Lotus Notes Connector is the best on the market. It handles all the calls to your Domino server, and adheres to all your security and data distribution rules, without any additional programming. It is this highly innovative and comprehensive Connector that also allows you to join data across multiple databases and display it on your device.

Centralized Device/User Management

You can manage a variety of devices from a single administrative console and push out standardized configuration. By leveraging user and grouping information from Domino directories, administrators can easily monitor and control different levels of mobile security and data access.

Data Compression

Relavis Mobilizer features on-device compression technology that offers a 10:1 compression ratio — the highest in the industry — giving users the ability to carry all of the data they need.

Data Synchronization

Since both the application and the data reside locally on the device, the PDA will continually synchronize with your production data as long as you have a wireless connection.

Secure Transactions & Lease-Key Technology

Relavis Mobilizer provides several layers of security to ensure that your organization's proprietary data is secure. Relavis Mobilizer supports username and password authentication, which is tied to Domino, and automatically honors the Domino security framework including ACL settings. Management tools allow IT administrators to remotely remove data from the device, and Lease Key technology is employed to secure the offline data even if the device is taken off the network. You never have to worry if your device is lost or stolen; your data is safe and secure.

Platform/Network Independence

Relavis Mobilizer works over all IP/digital circuit-based networks (e.g., GSM, CDMA, UMTS, HSDPA etc.), and can utilize multiple networks simultaneously. This provides you with the freedom to leverage multiple carriers — even those with different network types.
